The first Santa Fe Custom Buttonlock knife has a Titanium body, weighing only 2.3 oz with VG-10 “Super Stainless” Steel blade and is a joy to own and hold.

This first design by Miles and Anna Wirtel is made by a small Japanese knifemaker with full attention to detail, fit, form and finish.

The body of the knife is 3 3/8” with a 2 3/4” blade and has a pocket clip and is offered in our Fossilized materials as well as our Pearl and Gemstones.

The material in these knife handles is Woolly Mammoth Tusk- the undersides of Woolly Mammoth Tusks often show wear, suggesting that they were used in scraping snow and ice off the ground cover of vegetation during feeding. They also used their tusks for protection from predators, attraction during mating and as a display of dominance to other Woolly Mammoths. We proudly show our respect by using this material in our best knives.

Of all the animals that lived during the last Ice Age, the Woolly Mammoth is one of the best known.

The material in this knife handle is actually a section of a tooth from a Woolly Mammoth - one that lived around 15,000 years ago.

The material in these knives is fossilized Woolly Mammoth Bone, from Siberia, and over 10-15,000 years old. Woolly Mammoth Bones were used as construction material for dwellings by both Neanderthals and modern Humans during the ice age. Bones were made into various tools, furniture and musical instruments. Large Bones, such as shoulder bones, were also used to cover dead human bodies when buried.

Petrified Dinosaur Bone Jewelry Collection

Bone is a common material for knife handles - and we have the oldest bone available! The gemstone in these knife handles is actually a section of petrified bone from a sauropod (brontosaurus) that lived over 150 million years ago.

The Spalted Beech used in our collection is from Denmark and has been responsibly harvested, and has been collected over the past 10 years. The process of drying, priming and stabilizing is done to the highest standards. Our supplier Raffir is one of the most respected exotic material suppliers, and the Spalted Beech Collection is the beginning of Santa Fe Stoneworks exotic wood series - there will be many more to come!

The power of water, wind and time have worked it's magic at the Nacozari Mine in Sonora, Mexico, just south of Bisbee, Arizona. These forces have created beautiful Vein Turquoise, which runs like a river sandwiched between canyon walls. The host rock, or boulder, offers a wonderful contrast to the Vein Turquoise that it surrounds.

Our Vein Turquoise is a unique new presentation for Santa Fe Stoneworks pocket knives & table cutlery. We hope you enjoy our Vein Turquoise now, and as a future heirloom to be appreciated for years to come.

Fordite, aka Detroit Agate or Motor Agate, is pre-1985 automobile paint which has hardened sufficiently to be cut and polished. It was formed by the now extinct practice of hand-spraying multiples of car bodies in automobile factories. The overspray paint in the painting bays gradually built up on the tracks and skids that the car bodies moved on. Over time many colorful layers were built up. These layers were hardened repeatedly in the ovens that the car bodes went into to cure the paint. Some of these layers were baked over 100 times! Eventually the paint build-up would have to be removed and some auto workers, entranced by the beauty of this material took home chunks in their lunch buckets. We are proud to offer this very historic and unique material on our pocket and table cutlery.

Damascus Steel is characterized by its strength, edge holding ability, and its dramatic appearance. The Damascus steel used in our knives comes from Japan and is called "Sanmai Damascus" or sandwich damascus. These knives have what is called "Hammered Damascus" because the hammer marks produced in the folding process are left on the top of the blade with the bottom half finished.

SPYMI28
Mammoth Tusk / Mother of Pearl Sweeps

In the early 1980's Sal Glesser, the owner of Spyderco Knives and Accessories out of Golden, Colorado, contacted us about customizing his knives. We developed the SpyderWeb design, as well as a fan design that enhances the shape of the knife specifically for them. We continue to offer these designs exclusively on Spydercos.

Spyderco Clip-its come with a round hole in the blade for one-handed opening, a clip on the back to securely attach the knife in your pocket or purse or as a money clip, and the famous Spyderedge™, a serrated knife blade that cuts like a saw. Spyderco's philosophy is simple. Consistently deliver reliable high performance. Period.

Cholla cactus represent more than 20 species of the *Opuntia* genus (Famiy Cactacea) in the North America deserts. Familiarly known as "Walking Stick" cactus, the branches serve several functions - as water storage, photosythetic 'leaves' and flower production.

Cholla wood is the inner skeleton of these branches, once it has died and dried out we set it with dyed epoxies of various colors. This is the first material that we are producing in house and is only available through Santa Fe Stoneworks.

It provides a truly unique and one-of-a-kind handle material for pocket knives.

MAMMOTH TUSK

The underside of Woolly Mammoth tusks often show wear, suggesting that they were used in scraping snow and ice off of the ground cover of vegetation during feeding.

FOSSILIZED WOOLLY MAMMOTH TOOTH

15-10,000 year old Mammoth Tooth comes from Siberia and consists of Dentine and Enamel . Mammoths had 4 teeth and shed them about 6 times within their life time.

TURQUOISE

From the southwestern US. The powers and legends ascribed to this deep-blue-to-pale-green jewel are legion. Turquoise has been prized by many cultures including the Egyptians, Persians, Chinese, and American Indians.

CHRYSOCOLLA

Another ore of copper, Chrysocolla is a beautiful blue-green formed in the oxidation zones of copper ore bodies. The ancient Greeks powdered it

PETRIFIED DINOSAUR BONE

Bone is a common material for knife handles and we have the oldest bone available! This fossilized bone is from a sauropod (brontosaurus) that lived over 150 million years ago.

MALACHITE

From the Congo. Another cousin of copper, this rich green gem swirls with bands and circles of varied hues and was believed to ward off diseases, lightning, and witchcraft.

LAPIS

From Afghanistan. Royal stone of the ancient Egyptians, this rich blue jewel, flecked with pyrite, is associated with power, wisdom, and psychic abilities.

SPALTED BEECH

When felled Beech trees age under certain conditions, fungal colonies develop the distinctive banded staining of the wood, creating beautiful patterns of light and dark tones separated by even darker borders.

VEIN TURQUOISE

This turquoise is like a river between canyon walls, Turquoise wedged between stone that gives this impression come from the Nacozari Mine in Sonora Mexico, just south of Bisbee.

Santa Fe STONENEWORKS

Anna, Bill, & Miles

In the shadows of the Sangre de Cristo mountains sets a century-old adobe ranch house where artisans handcraft art knives of rare beauty. From one-of-a-kind custom designs to popular, affordable collections of pocket knives, table and kitchen cutlery, men's gifts and accessories each Santa Fe Stoneworks collectible is a unique example of the cutler's art - the quintessential marriage of fine steels with gemstone, shell or fossils.

To wear the Santa Fe Stoneworks name, each piece has completed a journey of countless painstaking steps. An artistic journey we travel, some think, to perfection.
